EDUCATION

University School of Automation and Robotics, GGSIPU
B.Tech in Artificial Intelligence and Machine Learning | CGPA: 8.0

Delhi, India
2022 – 2026

EXPERIENCE

Full Stack Development Intern

Jan 2026 – May 2026

Aveoearth Impact Private Limited

IPU-IIF (Onsite)

- Solved infrastructure fragmentation for early-stage founders by building full-stack features for **Aveostack** (startup SaaS) and **Aveoearth** (sustainable multi-vendor marketplace) using **Next.js**, **React**, **FastAPI**, and **Tailwind CSS**.
- Enabled secure transactions across 3 user roles (customer, vendor, admin) by integrating **PhonePe** S2S webhook payments and **Firestore Auth** JWT with role-based access control.
- Empowered vendors to independently manage their storefronts by building dashboards, product management UI, and cart & checkout flows backed by a hybrid **PostgreSQL/NeonDB** and **Firestore** stack.

Software Development Intern

Jun 2025 – Sep 2025

MakeHeadshot

Remote

- Eliminated the need for expensive photography sessions by shipping **Next.js** + **Tailwind CSS** features for an AI-driven SaaS that auto-generates professional headshots.
- Connected frontend workflows to AI processing pipelines by integrating REST APIs with backend developers, enabling end-to-end headshot generation.
- Improved user retention by optimizing frontend performance via code splitting and asset optimization, reducing page load times by **30%**.

PROJECTS

ProCode | *Golang, React, TailwindCSS, MySQL, JWT*

[Live](#) | [GitHub](#)

- Built a full-stack coding education platform solving the gap between learning and assessment — students compile and run code in-browser while teachers manage classrooms and evaluate submissions.
- Developed a **Golang** backend with **JWT** auth, classroom and assignment management APIs, and automated assessment logic supporting multiple user roles (student, teacher).
- Created a **React** + **Tailwind** frontend with an interactive in-browser coding environment, reducing code execution feedback latency by **40%** through optimized API orchestration and state updates.

Voice Bot | *FastAPI, React, Groq Whisper, LangGraph, Murf TTS, Supabase*

[GitHub](#)

- Addressed the unnatural feel of text-based AI assistants by building a full-stack real-time voice chatbot with natural turn-taking, LLM responses, and TTS streaming.
- Achieved sub-**800ms** conversational latency by building a **FastAPI** WebSocket backend with **Groq Whisper ASR**, **LangGraph** agents, and streaming **Murf TTS**.
- Enabled persistent, context-aware sessions by integrating **Supabase** for user data and conversation history with an animated **React** + **Tailwind** frontend and real-time VAD feedback.

Dokify | *FastAPI, GLiNER, Gemini, KittenTTS, spaCy, DistilBERT, Bark TTS, React Native*

[GitHub](#) | [Release](#)

- Reduced manual audiobook production effort by **70%** through an AI pipeline that converts PDF books into natural multi-voice audiobooks automatically.
- Built two backend pipelines: a cloud backend using **GLiNER** for NER, **Google Gemini** for per-chunk speaker and emotion attribution, and **KittenTTS** for synthesis; and a fully local offline backend using **spaCy**, **DistilBERT** emotion classification, and **Bark TTS** — both concatenated via **FFmpeg**.
- Delivered a seamless listening experience via a **React Native (Expo)** mobile app with Google Sign-In, PDF upload, and an integrated audio player.

Donut (In Progress) | *Rust, Axum, Tokio, Next.js 16, React 19, Tailwind CSS*

[GitHub](#)

- Building a visual node-based workflow platform that acts as a compiler and runtime engine — letting users drag-and-drop backend applications into existence without writing glue code.
- Developed a high-performance **Rust** runtime with **Axum** + **Tokio** capable of handling **10k+ concurrent async tasks** while powering sandboxed node execution, worker queues, and a fully custom in-house JWT auth system with refresh token rotation.
- Shipped pre-built integration nodes for **HTTP**, **Stripe**, and **Webhooks**, multi-tenant database integration, and composable **AI agent nodes** — all orchestrated through a **Next.js** + **React** drag-and-drop canvas.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Golang, Rust, HTML5, CSS3

Frontend: React, React Native, Next.js, Tailwind CSS, Vite, Streamlit, Expo

Backend & Databases: Node.js, Express.js, FastAPI, PostgreSQL, MySQL, Firebase Firestore, Supabase, NeonDB, Redis

DevOps & Tools: Git, GitHub, Docker, Vercel, Render, Postman, Clerk, Firebase Auth, Linux (Neovim, tmux, lazydocker)
